YAUHENI BUKA

Junior Product Engineer | Software Developer | AI-native Builder

Warsaw, Poland | +48 571 333 394 | yauhenibuka@gmail.com

github.com/slading | yauheni-buka.vercel.app

PROFILE

Product-focused junior developer building web applications, backend services and AI-enabled workflows. Delivered a booking system for a real two-salon business and built prototypes for transaction analysis and conversational ordering. Uses AI coding agents within a defined engineering process: scoped implementation, independent review, automated tests and release verification.

SELECTED PROJECTS

N2D Nails

Production booking system | github.com/slading/nail-booking

- Developed and deployed customer booking and authenticated staff workflows for a two-salon business.
- Implemented Supabase authentication and data flows, availability rules, scheduling, rescheduling and cancellation; deployed on Vercel.
- Worked with the owner on requirements and feedback, delivered fixes and completed production UI verification.

AI RFQ Operations Agent

Engineering prototype | github.com/slading/ai-rfq-operations-agent

- Built deterministic processing for requests for quotation: customer binding, line-item resolution and quote calculations, with explicit human approval boundaries.
- Verified behavior with fixture-based integration tests, regression checks and independent GitHub PR review. AI extraction and an integrated production workflow are outside the implemented scope.

SentinelAI

Transaction analysis project | github.com/slading

- Developed a Python/FastAPI transaction-risk pipeline combining deterministic analysis with LLM-assisted structured outputs.
- Used Pydantic, Groq, REST/SSE interfaces, audit logging and deployment tooling.

Voice Order Agent

Interactive prototype | github.com/slading

- Built a browser prototype for conversational ordering, multi-item updates, corrections and confirmation, using simulated data.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Backend and data: FastAPI, Node.js, REST APIs, Pydantic, Supabase, authentication

Engineering: Git/GitHub, automated testing, regression checks, debugging, Docker, Vercel

AI development: LLM APIs, structured outputs, AI coding agents, specifications, independent review

EDUCATION AND LANGUAGES

CKU #1, Warsaw - General secondary education for adults (expected 2027)

English - Fluent | Polish - B2 | Russian - Native
