YAUHENI BUKA

PRODUCT ENGINEER | FULL-STACK SOFTWARE ENGINEER

Warsaw, Poland | +48 571 333 394 | yauhenibuka@gmail.com
github.com/slading | yauheni-buka.vercel.app

PROFILE

Product-focused software engineer building end-to-end web applications, backend systems, and AI-assisted workflows. Delivered a booking platform for a real two-location salon business, with server-authoritative reservations and authenticated staff operations. Comfortable translating requirements into implementation, tests, and deployment, using AI-native engineering tools with explicit verification.

SELECTED PROJECTS

N2D Nails — Two-Location Booking Platform | github.com/slading/nail-booking

- Built customer booking and staff-management flows backed by Supabase, including service selection, availability, cancellations, rescheduling, and scheduling views.
- Integrated Supabase Auth, PostgreSQL Row-Level Security and server-side RPCs; booking operations revalidate availability and capacity atomically.
- Supported two salon locations, configurable working hours, service durations, reference-photo uploads and bilingual customer-facing UI.

AI RFQ Operations Agent — B2B Quotation Engineering Prototype | github.com/slading/ai-rfq-operations-agent

- Designed a deterministic RFQ domain covering product matching, contract/tier pricing, stock availability, delivery calendars, discounts and quote arithmetic.
- Implemented typed Python/Pydantic models, SQLAlchemy 2.0 persistence, Alembic migrations, SQLite constraints and append-only audit evidence.
- Built explicit blocking reasons and human-review boundaries; used pytest fixtures and regression checks to verify business rules.

SentinelAI — Transaction Risk Analysis Prototype | github.com/slading/SentinelAI

- Developed a Python/FastAPI risk-analysis pipeline combining deterministic transaction signals with Groq-powered structured LLM outputs.
- Built a responsive six-route investigation console, REST/SSE integration surfaces and audit logging; deployed a reviewed frontend fix to Vercel production.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

Backend & data: FastAPI, Node.js, Pydantic, SQLAlchemy, Alembic, SQLite, PostgreSQL, Supabase, REST APIs

Frontend & platform: Vanilla JavaScript, Astro, Supabase Auth, Git/GitHub, Docker, Vercel

Quality & AI: pytest, Ruff, integration/regression testing, LLM APIs, structured outputs, AI coding agents

EDUCATION

CKU #1, Warsaw — General secondary education for adults | Expected 2027

LANGUAGES

English — Fluent | Polish — B2 | Russian — Native
